

Bill Clark Pest Control will be providing treatment for adult mosquitoes in your neighborhood.

- Products will be applied using an ULV (ultra-low volume) truck mounted mosquito sprayer.
- Very fine droplets move through the air and kills flying mosquitoes on contact.
- The low rate and small droplet size minimizes impact on large insects such as bees.
- Products are applied after dark when bees and many other beneficial insects are not active.
- We will apply an EPA exempt product that contains plant oils.
- The product is a "green" pesticide.

Our company marked trucks will be loud and will have a flashing light. If you hear the truck coming, please move indoors until it has passed your home. Please do not drive, walk, or ride bikes behind the truck. The truck will drive at a slow speed when treating.

Our drivers will stop applying material if they see people walking or out in their yards. The motor of the spray rig will still be running. Hearing noise from the sprayer does not mean it is applying material. Application is controlled by a switch inside the cab of the truck. The motor on the sprayer will continue to run even when not applying material.
